

Activity Tracker – Edit Profile

The user of the activity tracker requests to change their profile information. The system asks the user to give their password to verify identity. The system goes through the changeable aspects of the user's profile and allows for changes to be made. As each change is made the user selects to save their changes. The system then saves the new information given and updates the user's profile.

Actor: Customer

Preconditions - Profile must be created

- The user must be logged in

Postconditions: - The user's profile information will be updated

Main Flow

1. Customer presses button to edit their profile
2. System prompts user for password.
3. Customer enters password
4. System displays name and email address
5. Customer makes changes
6. Customer selects save
7. System allows for changing profile picture
8. Customer uploads picture
9. Customer selects save changes
10. System displays preferred activities.
11. Customer makes changes
12. User presses save
13. System displays profile visibility preferences
14. Customer makes desired changes
15. Customer presses save changes

Alternate Flows

2-14b. User tells system to cancel

1. System asks if user is sure they want to cancel
2. User selects yes
 - 1b. User says no
 - 1) System resumes where it left off in profile editor
3. System exits profile editor without saving any changes

7-13c. User requests to go to previous screen:

1. System displays previous screen and allows for changes to be made

2c Incorrect password:

1. System displays that an incorrect password was entered
2. System does not allow any changes to be made

4c Invalid email address

1. System says an invalid email address was entered
2. System does not save invalid email address
3. System allows for user to correct mistakes

4-10d User does not want to change anything on current screen:

1. User tells the system they want to go to the next page
2. System doesn't save anything and goes to the next page
